Enviro Waste Oil Recovery is offering an innovative recycling program in order to help its customers eliminate the need to landfill their waste.

ENVIRO "WASTE-TO-ENERGY" PROGRAM

Enviro Waste Oil has now partnered with **WASTE MANAGEMENT** to offer the complete environmentally friendly solution to the recycling needs of our customers. To start, our representative will come out to you at no charge and properly profile your waste stream. Uni-bins, totes or drums are delivered to your site to accommodate your waste. Containers are appropriately labeled for storage and transportation. Once they are ready for a pick up, a

DOT (Dept. of Transportation) waste manifest is generated and one of our permitted trucks collects the waste for safe shipment to one of our licensed facilities. Your material is terminated as your waste, removing you from liability and replacing it with us. The waste is commingled with other similar recyclables and shipped to the Waste-to-Energy Facility. Because the oil provides a high BTU value, the waste is incinerated for the generation of electricity for the local power grid.

Our WASTE TO ENERGY program is designed to recycle wasted absorbents and to generate electricity. This works towards designating our customers as zero landfill companies and helps them identify with the "green" initiative.

BENEFITS OF PROGRAM:

- Substantially reduces company risk and liability
- Creates electricity from your waste
- Proactive on site service of waste absorbent materials
- Audit reports available
- Sealed, safe containment

Nothing you recycle with Enviro Waste is landfilled!
